Is There An Access Equivelent For Mac

Is a widely used enterprise database application It's claimed that MySQL database server is the world's most popular open source database and it is available free for OS X.. However MySQL is more like Oracle than MS Access and you do need serious developer skills to create database applications with MySQL.. Originally posted by harps@Mar 15 2005, 09:47 AM Whilst FileMaker would do the job, the cost is a prohivative (\$450 min).. There are a number of very nice administrative tools available for MySQL, and of course there is a nice interface for running SQL queries, however forms are usually custom built using a browser interface.
